**Prune—Late-Fall Weed Survey**

**Supplement to UC IPM Pest Management Guidelines: Prune**

Grower/Orchard: ____________________________________________ Date: _____________________________

Comments: __________________________________________________________________________________

Mechanical Control/Herbicide/Application Date: ______________________________________________________________________________

Directions:
1. After first rains, look for winter annuals in tree rows to check the effectiveness of any preemergent herbicide applications.
2. Check the ground cover in row middles for perennial seedlings. Perennials are unwanted in any area of the orchard.
3. Use the checklist to record weeds in your orchard and use the map to show the areas in which you found specific problematic weeds.
4. Rate infestation either using a numeric scale from 1 to 5 (1 being lightest), or use “light,” “medium,” or “heavy.”
