Prune—Final Fruit Damage Evaluation for Caterpillars, Scale, and Brown Rot

Supplement to UC IPM Pest Management Guidelines: Prune

Directions: Conduct this sample 2 to 4 weeks before harvest. Select 40 fruit per tree at random from 25 trees throughout each orchard, and examine for damage caused by caterpillars (worms), scale, and brown rot. Fruit may be picked or left on the tree. Record the results on the form.

Grower/Orchard: _____

Date: _____

Tree number	Caterpillars (worms)			Scale		Brown rot
	Number of fruit with caterpillar damage	Caterpillar species	“Surface” or “deep” damage?	Number of fruit with live scale	Number of fruit with parasitized scale	Number of fruit with signs and symptoms
